The CPT factory

Track-Truck

with HYSON 200 kN static cone penetrometer

features

- operates at highway speeds
- terrain mobility
- simple in operation
- multifunctional applications like all our mobile CPT rigs

creating tools that move your business

The unstoppable Track-Truck, with HYSON 200 kN static cone penetrometer

bogging down a CPT-rig no longer exists

For more than 45 years A.P. van den Berg has specialised in the design and manufacture of equipment for geotechnical and environment in situ investigation based on the static cone penetration testing method (CPT). With the CPT method,

special cones and soil sampling equipment can be pushed 50 metres (165ft.) or more into the soil. The bearing capacity or contamination of the soil can thus be determined. The main obstacle for performing these tests is mobility on soft ground. Not however with out Track-Truck.

the unique Track-Truck

The A.P. van den Berg Track-Truck is mobile where other heavy vehicles get stuck, thanks to the integrated track system. The Track-Truck combines hydraulically driven tracks on the CPT-truck providing a unique mobile vehicle, at home on soft soil. By retracting the tracks, which are remotely controlled from the driver's cabin, the Track-Truck runs as an ordinary truck on the highway. Standard a wireless remote control is included for driving on the tracks only.

a standard truck turned into a multifunctional bruiser

The track system is suitable for 4x4 off-road trucks and reduces the wheel load by 60 to 70%. The configuration proves ideal for CPT applications and modified version of the Track-Truck are equally suitable for instance for mobile drilling rigs, ambulances

and field hospitals, mobile workshops, winch vehicles for cable-laying or mobile cranes. Steel or synthetic crawler plates can be used, depending on the application. With a 4x4 wheel configuration, the function of the levelling jack is taken over entirely by the crawler's suspension jacks.

switch over to the Track-Truck

The Track-Truck drives on roads and terrains in-accessible to other vehicles. Contact us for more details about the many possibilities of our advanced Track-Truck or ask for the demonstration on video or CD.
