WHAT WE DO

Insitutek help our clients use modern ground improvement and in situ testing methods to increase rates of construction, lower cost, improve quality, reduce risk and reduce your environmental footprint in Australia, New Zealand and the Pacific.

Insitutek bring you high quality, leading edge products and services that you can count on for insitu testing and ground improvement.

The team at Insitutek have been supplying and supporting the civil construction industry since 2005.

In situ testing, enabling you to make better informed timely decisions

- Leading edge **in situ testing methods** for geotechnics, earthworks and pavements.

Ground improvement, delivering more sustainable outcomes

- Long lasting sustainable **clay soil stabilisation with TERRA-3000®** for mechanical and hydraulic performance improvement of cohesive soils, rather than remove and replace.
- **Impact Rolling or High Energy Impact Compaction** using 3, 4 & 5 sided and polygonal impact rollers to compact material to depths from 0.8m to 4m for cost effective, fast and quantified ground improvement.
- Using **Intelligent Compaction** to create uniform efficient quantified compaction

OUR SERVICES

Our relationships with our clients is built on serving them and creating value over the long term. For many, we are a trusted supply partner who they count on to help solve problems. Our services include:

- 👤 Sales
